
All-in-one coverage for your business

PROTECTION SERVICE FOR BUSINESS

F-Secure

IT security is a must

IT security is fundamental for any business. The consequences of a malware attack or security breach can be staggering.

Even a single malware infection can bring business operations to a grinding halt. Without the additional protection layers offered by a dedicated anti-virus solution, malware can result in the contamination of the whole corporate network.

Business entities are highly lucrative targets for cyber criminals. Most victims fall prey to opportunistic exploitation of security vulnerabilities. These originate from the challenge of ensuring comprehensive security with limited IT personnel and resources.

Complete protection for your business

F-Secure Protection Service for Business (PSB) offers complete and comprehensive protection for the whole IT environment: desktops, laptops, mobile devices, as well as email and file servers.

Protection Service is a hosted, comprehensive turn-key protection suite for multi-device environments. It offers the best security on the market, coupled with advanced value-added features such as Software Updater, and ensures worry-free state-of-the-art protection for your business.

PSB provides real-time protection against viruses, spyware, spam, intrusion attempts and web-based attacks. F-Secure's licensing policy is the most flexible in the industry: you can choose either monthly or yearly billing for the service.

Security for business critical operations

PSB offers you one solution to cover all your security needs. As a PSB customer, you always have the latest and best protection in use. The solution automatically updates security signatures, hotfixes, and new application versions.

For you as a customer, PSB is an essential part of your corporate security policy and an important tool in protecting business-critical operations. It offers lower implementation costs, high-quality virus detection, and easy central management.

79% of victims are targets of opportunity.

A robust foundation and a lightweight client mean that Protection Service for Business does exactly what it should: it protects you from threats and does not impact performance or user experience.

1. Based on F-Secure H1 2013 Threat report

Software Updater protects you from known threats

Keeping software up to date is a critical part of computer and business security. 60% of top ten malware could have been avoided by using up-to-date software [1].

PSB Workstation Security for Windows includes Software Updater, which scans the computers for missing software updates. It keeps the operating system and 3rd party applications up to date and patched against vulnerabilities.

60% of top ten malware could have been avoided

Two ways to handle security

Security as a service for added benefits

PSB is also available as a security as a service model. This means you can stop worrying about IT security and let your local F-Secure certified solution provider look after the security issues. You can concentrate on your own core business.

Manage your own security

If you have the resources in-house to manage IT security, you can choose to run PSB as self-service. You get award-winning security and powerful management tools in one package.

Protection Service for Business

Let experts take care of your IT security. We make sure your e-mail works, data stays safe and computers and mobile devices are always up-to-date and protected – so you can focus on the business itself.
