

Secure sharing and communication

F-SECURE PROTECTION FOR SERVERS,
EMAIL AND COLLABORATION

The value of security

Most malware attacks use software vulnerabilities to reach their targets. Only 90% of malware attacks are stopped on average by traditional anti-malware. Malware is becoming more sophisticated, actively resisting traditional detection technologies.

75% are victims of opportunity

With 75% of the attacks based on opportunity, everyone can be a target ^[1]. Servers and email are still very common targets for attack, even if social networks get an increasing share. Since the consequences of a security breach can be staggering, even putting the whole business in danger, it's crucial to stop attacks before they can even enter the company network.

First line of defense

F-Secure Server Security provides powerful real-time protection for file servers, while F-Secure E-mail and Server Security also includes protection for email, SharePoint and EMC servers. The products protect the IT environment against constantly evolving security threats, ensuring that infected computers don't spread viruses through network shares or email.

Both solutions offer a simple, transparent licensing model without hidden costs. Award-winning protection keeps company assets safe from zero-day malware attacks, while their easy adoption and management save you time and money.

A packaged solution

Protecting companies' business critical IT components

File
Servers

Terminal
Servers
and Citrix

Email
(Exchange)

Sharepoint

EMC

The solutions are a packaged first line of defense. Providing scheduled and on-demand scanning, anti-spam, and browsing protection, they can be centrally managed with Policy Manager. The solutions offer easy, trouble-free security for companies of various sizes.

Premium version for improved security

The products are available as Standard and Premium versions. The Premium versions include Software Updater, a turn-key solution that offers increased visibility to potential threats by helping keep the operating system and third party applications up to date.

Software Updater, combined with F-Secure's DeepGuard technology against zero-day threats, make the Premium products solutions that will put you at the top of your security game.

A comprehensive solution

F-Secure Server Security is designed for Windows file servers. In addition, F-Secure E-mail and Server Security protects Citrix, Microsoft Exchange, SharePoint and EMC servers. Linux servers can be protected with F-Secure Linux Security.

Server Security

The product includes award-winning F-Secure technologies to protect file servers against malware without slowing down the systems. It provides enhanced cloud-based protection with DeepGuard.

E-mail and Server Security

The product additionally offers anti-virus and malware protection for email, including spam control, Browsing Protection for terminal users and centralized quarantine management.

Linux Security

The solution includes integrated anti-virus, anti-spyware, firewall, integrity checker, protection against rootkits, as well as comprehensive support for all major Linux distributions.

Server Security & E-mail and Server Security

Centralized management

F-Secure Corporation

Innovation, reliability and speed of response have made F-Secure one of the world's leading IT security providers since its founding in 1988. Today, F-Secure's award-winning, easy-to-use products are trusted in millions of homes and businesses globally. We provide powerful real-time protection allowing computer and smartphone users to enjoy a connected life.
