

F-Secure Internet Security 2007

Today's Challenges

In addition to computer viruses, there is now a new breed of threats on the Internet, such as carefully planned targeted attacks that can pass through conventional security solutions unnoticed, possibly taking over your computer for illegal purposes. For this reason, it is essential to protect your computer not only against computer viruses and worms, but against any suspicious activity that might be a sign of danger in your computer as well.

The Solution

F-Secure® Internet Security™ 2007 provides a complete and easy-to-use protection against all Internet threats, whether they are known or previously unidentified. It includes an award-winning antivirus, an easy-to-use personal firewall, an improved antispyware and a new technology that constantly monitors the very heart of your computer, ensuring that no malicious programs can take over your computer even if you do not have all the latest updates. In addition, the product filters unwanted spam and so-called phishing attempts from your e-mail, and with the parental control, you can block access to websites with questionable content.

Protect Yourself Against the Unknown

Fast spreading targeted attacks, or so-called zero-day attacks, are a new growing problem on the Internet. The latest version of F-Secure Internet Security comes with a new intelligent technology that protects you against these unforeseen threats.

Protect your Privacy with Improved Antispyware

Spyware can secretly track your surfing habits, abuse your Internet connection by sending data to a third party, profile your shopping preferences or hijack your web browser. F-Secure Internet Security protects your privacy by detecting and removing such software from your computer.

Stay Free from Spam and Phishing Attempts

The amount of spam is increasing as well as the number of e-mail schemes designed to get you to unknowingly disclose your private information. With F-Secure Internet Security, you can protect yourself against these rapidly growing problems. F-Secure Internet Security detects and filters spam and phishing attempts in e-mails.

Parental Control with Time Lock and User Profiles

The Parental Control feature ensures that your children do not enter questionable web sites or use the Internet when you are not around. You can also define age-based user profiles that have different access levels to the Internet content.

Key Features

Protects your computer against viruses, worms and other attacks

With daily automatically updated virus protection from the world-renowned Data Security Laboratory of F-Secure and the new intelligent technology that protects you against zero-day attacks and other future threats, you can safely use your computer, now and tomorrow.

Detects and removes spyware from your computer

F-Secure Internet Security removes secretly installed software from your computer, ensuring that your system is running smoothly and clean of spyware.

Protects your computer against hackers

You keep your private data to yourself with the personal firewall that stops hackers from breaking into your computer.

Helps you stay free from spam e-mail and phishing attempts

F-Secure Internet Security detects and filters unwanted spam and e-mail schemes designed to steal your private information.

Protects your children against unwanted Internet content

F-Secure Internet Security ensures that your children do not enter objectionable sites or surf the Internet when you are not around.

Protection Against Zero-day Attacks and Rootkits

Zero-day attacks are a new type of threat that can break into your computer even if you have up-to-date security software installed. The new F-Secure DeepGuard™ technology now detects and prevents any suspicious activity that might indicate a danger in your computer. Rootkits are also detected and removed.

Web Traffic Scanning

Certain web sites can infect your computer even if you do not download anything from the web site. Web Traffic Scanning protects you against this problem.

E-mail Scanning

POP3, IMAP and SMTP traffic are scanned for viruses so that you do not have to worry about infected e-mails.

Easy to Install and Use

F-Secure Internet Security is extremely easy to install and use. As the software is highly automated, you do not have to understand the complexities of data security.

The Fastest Protection Against New Virus Outbreaks

Immediate reaction times and fast cures during new and emerging threats ensured by F-Secure Research Team working 24 hours a day.

Security News

News about virus outbreaks is delivered straight to your computer. This ensures that you get information about the new viruses and their behavior immediately, as well as the instructions on how to avoid the infection and a confirmation whether your computer is already protected against the latest threat.

Multiple Scanning Engines

F-Secure Internet Security uses multiple scanning engines, bringing you the very best in detection and disinfection. Each of the scanning engines is specialized in detecting a different type of malware. It is like having several antivirus products running in your computer at the same time!

Intuitive Product Tutorial

Learn about product features and functions. This easy to use tutorial provides answers to many essential questions on how to use the software.

Software in your Language

F-Secure Internet Security has a clear user interface, including an easily accessible electronic manual. Both the software and electronic manual are available in your language.

F-Secure Internet Security 2007 received CD Info/CD Austria award, January 2007

F-Secure Internet Security 2007 received PC Pro Recommended award, January 2007

F-Secure Internet Security 2007 won the Editor's Choice award in Windows News magazine, December 2006

Supported Platforms

- Windows Vista, all 32-bit editions
- Windows XP Home Edition
- Windows XP Professional
- Windows 2000 (*)

[*] Workstation only, Windows Server is not supported.
