

## FACT SHEET

F-Secure Internet Security 2010 is a complete security solution which offers you the best security for your online life. It keeps you clear of viruses and other malware, blocks spam, and prevents cyber criminals from gaining access to your sensitive and personal information.

### WHAT'S NEW

Improved scanning technology, better user experience, browsing protection and Windows 7 support.

- All new and task-focused user interface offers enhanced usability.
- Core technology improvements for malware and spyware detection and removal.
- Browser protection to prevent infections from malicious websites and give users instant classification information about websites in search results and in web based email systems.
- Parental Control, Spam Control and Application Control use in-the-cloud technology to guide the user and make automatic decisions more effectively.
- Fully automatic malware removal, improved performance and optimized default settings.

### KEY FEATURES

- Real-time virus and spyware protection, and protection against unknown threats (F-Secure DeepGuard™). Manual scanning of viruses, spyware and rootkits.
- Browsing protection, which includes the unique Exploit Shield, protects from malicious sites, malware and vulnerabilities.
- Firewall with Application Control, Intrusion Prevention and Dial-up Control.
- Spam Control with protection against spam and phishing e-mails.
- Parental Control with protection for different user types against unwanted web content, including profiles for different types of web users.
- Frequent automatic updates that keep both the databases and the software itself up-to-date against all the latest threats.

### CONSIDERATIONS

- Several protection technologies use server queries (in-the-cloud) by default to implement or improve protection capability and performance. Therefore an active Internet connection is recommended.
- The antispam feature is always optimized for currently active spam e-mails. This may affect detection rates when out-of-date spam sample collections are used.
- Due to whitelisting of known items, the amount of scanned files shown in the user interface might differ from the number of files in the folder that has been scanned.
- Various smart mechanisms are used to limit the scanning of known clean objects. A second full system scan is significantly faster as only changed files are scanned.

- Web traffic scanning (disabled by default) replaces the content of malicious item with NULL content meaning that the downloaded file will have the same name and size but without the malicious content. Even if web traffic scanning is deactivated, other technologies stop malicious files and activities.
- Activation of advanced heuristics in on-demand scanning enables deep heuristics also in on-demand scanning but causes slower scanning and more false alarms.

## SUPPORTED OPERATING SYSTEMS

- Windows 7 32-bit and 64-bit: all versions
- Windows Vista 32-bit and 64-bit: Starter, Home Basic, Home Premium, Ultimate, Enterprise, and Business editions
- Windows XP: Home, Professional and Media Center editions

## AVAILABILITY

Suggested retail price €NN.NN  
In stores and online from 03/09/2009 onwards
