Ponsse takes a multilayer approach to protecting confidential data, reputation and intellectual property.
Ponsse, one of the world’s leading manufacturers of forestry machines, moved from an on-premise email solution to the Microsoft 365 collaboration suite. F-Secure’s easy-to-use Cloud Protection for Microsoft 365 was a perfect match to secure Ponsse’s confidential information.

In the midst of cloud transformation

Ponsse has grown from a small family-owned company to a world-class manufacturer of forestry machinery. Ponsse’s mission is to contribute to its customers’ success with productive and reliable forestry machines and services. Confidential customer relationships, honesty and reliability are at the core of Ponsse’s values. With a strong international reputation to uphold and valuable intellectual property and product development blueprints to protect, solid cyber security is non-negotiable at Ponsse.

To increase productivity and cost efficiency, Ponsse moved from an on-premise email solution to Microsoft 365. The cloud transformation left Ponsse running with only the built-in security capabilities of Microsoft 365.

Jukka Vidgrén, IT Designer, responsible for Ponsse’s IT development, infrastructure, virtualization and security, did not want to settle for a single layer of security.

“It’s a lot easier to target organizations when there is only one solution in place,” Vidgrén says. “In the case of Office 365, it’s easy for an attacker to test the Microsoft tenant. Without additional layers of protection, you can target a phishing email directly at the system administrator and see if it works.”

PONSSE – A LOGGER’S BEST FRIEND

Ponsse is one of the world’s leading manufacturers of cut-to-length forestry machines. The largest share of Ponsse’s revenue comes from exporting its products to more than 40 countries around the world. Ponsse’s machines are manufactured at its ultra-modern factory in Vieremä, Finland. Sustainable digitalization is at the heart of Ponsse’s.

Key figures:

- 1800 employees
- €667.4 million revenue
- Founded in 1970

PONSSE’S REQUIREMENTS AND SELECTION CRITERIA:

- Cloud-native, API-based solution
- Protection against advanced threats beyond Microsoft’s built-in capabilities
- Easy to use and deploy
- Seamless compatibility with Microsoft 365

BENEFITS:

- Additional security layer for Microsoft 365
- Seamless cloud-to-cloud integration
- Effective protection against malicious content
“Ponsse is a well-respected company, and cyber security is key in maintaining that reputation. It’s important to understand that if your security is not in good shape, your reputation can be ruined in the blink of an eye,” Vidgrén says.

“It is important to understand that if your security is not in good shape, your reputation can be ruined in the blink of an eye.”

Jukka Vidgrén,
IT Designer Infrastructure

Seamless integration with a cloud-native solution

Ponsse’s email and communication flow of nearly 1800 employees and its internationally distributed operational ecosystem called for efficiency. The company needed a flexible, cloud-native security solution for its Microsoft 365 environment that was easy of use, swift to deploy and required minimal administration work.

“The solution is so easy to use that anyone can learn it in ten minutes,” says Vidgrén.

“The solution is so easy to use that anyone can learn it in ten minutes.”

Offered secure email gateway solutions leveraging older technologies. That wasn’t for us. Those solutions require a lot of installation work.”

Vidgrén says Ponsse found the perfect combination in Microsoft’s spam filtering and F-Secure’s protection against malicious content. The API-based architecture of F-Secure Elements for Microsoft 365 is scalable, adaptable and detects advanced threats immediately.

The ability to find lingering threats that had already been received before deploying the solution tipped the scales for F-Secure – something secure email gateway solutions lack.

Layered protection and ease of use the main benefits

Ponsse’s Microsoft 365 environment is now protected with an added security layer – precisely what Vidgrén and the team were looking for.

“Layered security is key with cloud services,” Vidgrén says. “In practice this means onion-like multilayer protection. You don’t rely on just one solution.”

Since the deployment, the solution has stopped email-borne threats from entering Ponsse’s environment. It has detected a number of malicious links and confirmed them as dangerous.

For Ponsse’s IT team, F-Secure’s cloud protection offers ease of use and efficient workflows. Vidgrén says these benefits free up his team’s resources for other tasks. A well-designed solution and dashboards, along with easy configuration, require little work from the team.

“Ease of use is definitely the most important benefit,” Vidgrén says. “Had we chosen another product, it would have meant excessive training and configuration work. We’re talking about weeks of extra workload annually.”

F-Secure Case Study
The solution also enables Ponsse’s IT team to scan emails received even before F-Secure’s solution was deployed. “You can access the history of older emails. You can’t do that with older gateway solutions,” says Vidgrén.

**Vendor expertise and smooth collaboration were key**

Ponsse appreciates the smooth collaboration with F-Secure, and the opportunity to influence product development.

“We feel that things move forward much better than when working with larger vendors,” Vidgrén says. “With very large vendors there may not even be an opportunity to discuss things. We now get support directly from the vendor.”

That support includes valuable cyber security insights from F-Secure’s experts, who constantly handle a full spectrum of threats. Vidgrén points out that this access to expertise is the benefit of working with a vendor specialized in cyber security.

As Ponsse’s digital transformation progresses, the role of cyber security will only grow, Vidgrén says. “We’ve put a lot of emphasis on security, and in the future this will only increase. Cyber security is extremely important, and the incidents popping up make one realize this more and more.”

**Jukka Vidgrén, IT Designer Infrastructure**

The role of cyber security is increasing on every level at Ponsse. We’ve put a lot of emphasis on security, and in the future this will only increase.”

ABOUT F-SECURE

Nobody has better visibility into real-life cyber attacks than F-Secure. We’re closing the gap between detection and response, utilizing the unmatched threat intelligence of hundreds of our industry’s best technical consultants, millions of devices running our award-winning software, and ceaseless innovations in artificial intelligence. Top banks, airlines, and enterprises trust our commitment to beating the world’s most potent threats.

Together with our network of the top channel partners and over 200 service providers, we’re on a mission to make sure everyone has the enterprise-grade cyber security we all need. Founded in 1988, F-Secure is listed on the NASDAQ OMX Helsinki Ltd.
