

# WORLDGATE EXPRESS LINES CHOOSES F-SECURE'S BUSINESS SUITE FOR IMPROVED PERFORMANCE

"We can finally work with total confidence knowing that our computers are protected, while experiencing no performance issues."

**Mr. Sree Vasan, Head IT Officer**

**Company:**

Worldgate Express Lines International

**Industry:** Shipping & Logistics

**Country:** India

**Solutions from F-Secure:**

F-Secure Business Suite Premium

## WORLDGATE EXPRESS LINES INTERNATIONAL

Worldgate Express Lines International Pvt Ltd, the Indian subsidiary of the global shipping company of the same name, is a major player in the international shipping and logistics industry. Founded by seasoned professionals in the freight business, the firm has deep expertise in the area of trans-continental integrated logistics, and strives to be the best total solution provider within its industry. Worldgate Express Lines International has over 600 employees, and operates in over 10 locations all over India.

# THE SOLUTION

Sree Vasan, the head IT officer of logistics firm Worldgate Express Lines International, had been extremely unsatisfied with the company's endpoint security solution for multiple years. Although the firm's IT infrastructure had been set-up efficiently and the different enterprise applications generally ran very smoothly, employees were experiencing a host of problems on their desktops and laptops. The computers were running slow and functioning in an unstable manner – this, in turn, made operations inefficient. After confirming the issue as relating to their endpoint protection software, Mr. Vasan set out to find a better alternative.

“We, as a company, are very particular about securing the hundreds of PCs we have deployed at various branches and operational centers nationwide”, Mr. Vasan states. “Initially, we used endpoint security software from Kaspersky Lab for the purposes of securing our PCs. But we had a bad experience with them, as their solution used to slow our systems down. The resource-hungry security software from Kaspersky rendered our computers inefficient.”

After Kaspersky, Worldgate Express Lines International moved to K7 Computing, an Indian endpoint security provider, to no avail – the company's PCs continued to demonstrate performance issues. Vasan was beginning to think that his firm simply could not find a suitable solution which would guarantee protection without causing drops in performance. Towards the end of 2015, just as Vasan was losing hope, he met with a representative from F-Secure, who introduced an efficient, effective and simple endpoint protection solution. The best part? No performance issues.

“The most glaring attribute of F-Secure endpoint security software was its lightness. Unlike Kaspersky Lab and K7 Computing products, F-Secure endpoint security software was not resource hungry”, Mr. Vasan confirms.

**Mr. Sree Vasan, Head IT Officer**

“F-Secure promised us a powerful and effective endpoint security system, which would guarantee us the best protection available on the market, while maintaining the high performance of our computers”, Mr. Vasan continues. “This was something we simply couldn’t pass up on.”

Following approval from top management, Vasan began the implementation of F-Secure’s “Business Suite Premium” solution on their desktops, with support from an F-Secure partner. The results were extremely positive.

“We can finally work with total confidence knowing that our computers are protected, while experiencing no performance issues”, Vasan says. “In addition, F-Secure’s Business Suite is cost-effective, simple to manage and has excellent service support. What’s more, it offers automated patch management for thousands of applications and versions as part of the package”

In the future, Worldgate Express Lines International plans to migrate their cyber security program to F-Secure’s agile cloud platform – the company is also in the process of extending F-Secure’s endpoint security software to cover their laptops.

## Benefits of F-Secure's Business Suite

Efficient and effective

Automatic patch management

No performance issues

Cost-effective

Excellent service support

Powerful central management
