

TOP 7 REASONS YOU NEED AN EDR SOLUTION

Endpoint Detection and Response (EDR) solutions are designed to continuously monitor and respond to threats that have gone under the radar. Here are seven key reasons why you need EDR.

1. PREVENT DATA BREACHES

EDR system detects threats in real-time and allows you to stop a breach immediately before your IT environment is compromised.

2. AUTOMATICALLY DETECT THREATS

EDR tools automatically detect the threats that have bypassed the internal security and flag the issue immediately.

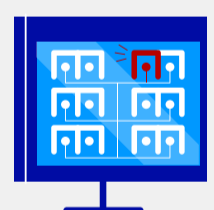

3. ACCELERATED RESPONSE TO THE INCIDENTS

EDR tools significantly increase the incident response time and allow you to stop an attack before it becomes a breach.

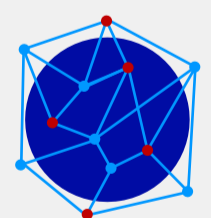

4. CONTINUOUS REAL-TIME VISIBILITY

allows you to monitor all your endpoints and stop any suspicious activities before they attempt to breach your environment.

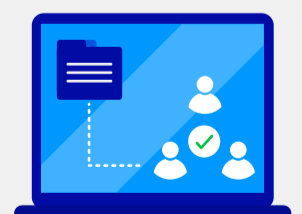

5. PROACTIVELY HUNT FOR THREATS

an effective endpoint detection and response solution proactively searches for threat indicators and alerts you of any suspicious activities.

6. SIMPLIFIED ENDPOINT MANAGEMENT

EDR solutions ease up the endpoint management process by allowing you to monitor, control, and respond to threats through one central platform.

7. COST EFFICIENT AND REDUCED WORKLOAD

A good EDR solution enables your IT team to work more effectively by reducing the need to constantly monitor multiple tools and dashboards.
