

E-MAIL AND SERVER SECURITY

FIRST LINE OF DEFENCE AGAINST EVOLVING THREATS

Malicious email is still one of the main ways to get infected.

Therefore, keeping your email flow intact and secure is a key element to business security.

Email and Server Security offers centralized protection for Microsoft Windows servers, Microsoft Exchange, and Microsoft SharePoint, as well as Terminal, Citrix, and Linux servers and EMC Storage protection (CAVA).

SECURING EMAIL

Protects your communication, as well as saves resources, time, and money.

- ✓ Get trouble-free security for companies of all sizes.
- ✓ Secure your sharing and collaboration systems with the best available protection.
- ✓ Protect your networks and confidential data comprehensively against all types of malware.

SECURE EMAIL AND SERVER PROTECTION IN ONE

F-Secure Email & Server Security is an easy-to-use server and email security software solution that provides protection for file servers and email servers against malware and software exploits.

Anti-virus for Microsoft Exchange

Protecting the server against malware

Anti-virus for Microsoft SharePoint

Real-time protection for all content used with Microsoft SharePoint servers

Spam control

Detects and filters spam messages from email traffic, providing real-time protection against all types of spam, regardless of its content, format or language

Terminal Server/Citrix and EMC CAVA

Malware scanning support for Terminal Server/Citrix and EMC Storage protection (CAVA).

Microsoft file server protection

Get unmatched protection against viruses, Trojans, rootkits, and other malware

Web traffic scanning

Detects and blocks malicious content in web traffic (HTTP protocol) to provide additional protection against malware

DeepGuard™

Our proactive on-host protection engine

Offload scanning agent

Allows you to offload malware scanning to F-Secure Scanning and Reputation Server in Virtual and Cloud Environments

Browsing Protection

Protection for your terminal users against web browser exploits and rogue web sites

Software Updater

Keeps your system and applications up to date by installing patches as they are released by vendors.

Botnet Blocker

Stops criminals aiming to control compromised assets by preventing communication to Command & Control domains

Advanced Protection

Allows the administrator to block selected content from websites which have unknown or suspicious reputation
