

F-SECURE PHISHD

Improve your security culture

Human error is a common contributor to cyber security incidents. Even if your organization has invested significantly in security controls, those controls are irrelevant if adversaries exploit the vulnerabilities of your workforce.

F-Secure Phishd is a managed service designed to reduce risk by measurably improving security culture and employee behavior by educating and empowering your employees. The stronger your organization's security culture, the more resilient your employees will be to social engineering attempts against them.

Key benefits

- Measurable improvement in employee security behavior
- Scientific approach and insights leading to genuine behavior change
- Tailored, customized and targeted service relevant to your organization
- Mitigates risks to your business and brand reputation from phishing attacks
- Connect with our cyber security experts with unique real-life insight to the most recent attacks

SERVICE OFFERINGS

Security Culture Program tailored to achieve the greatest possible improvement in security culture and reduction in risk from employee behavior.

Microsoft Outlook Reporting Plugin for employees to report suspicious emails and receive feedback. Suspicious emails are automatically assessed, given a risk rating and delivered to your SOC.

5-step approach to measurably improve security behavior

1. INVESTIGATE

Broad assessment of how employees would perform in the event of a real attack and where the threats could originate from. Simulated attacks provide a practical demonstration of a cyber attack and are used across all steps to provide insights and measure the impact of the security culture program.

2. EDUCATE

Our training is designed using behavioral science principles in order to effect three core drivers of behavior: knowledge, attitude and process. Training is targeted at groups known to have specific issues and characteristics, making it truly relevant and impactful to your organization.

3. EMPOWER

Deployment of tools, technology and processes that empower employees to develop positive security behaviors. With our Microsoft Outlook Reporting plugin employees can report suspicious emails at the click of a button and have them automatically assessed.

4. ITERATE

Continuous assessments not only keep awareness high, but also allow you to measure the improvement in employee behavior over time. This enhances employees' attitude, behavior and knowledge, and can identify future assessment or training needs.

5. ADDRESS

Reporting is provided on the outcome of campaigns and training. Our reports are suitable for executive, HR and technical audiences and contain an executive overview, executive summary, detailed findings and recommendations.
