

INTERNET GATEKEEPER

BLOCK ALL DATA INTRUDERS BEFORE THEY ENTER YOUR NETWORK

Malware can enter an organization's network in many different ways. The easiest and most effective way to stop harmful content spreading via the Internet is to stop it already at the gateway level of the network.

F- Secure Internet Gatekeeper scans all incoming e-mail, web, and file transfer traffic. F-Secure Internet Gatekeeper meets all the needs of corporate networks and is cost-effective and easy to deploy and manage.

BEST PROTECTION ON A GATEWAY LEVEL

- ✓ Provides the best Real-time protection service in a gateway product.
- ✓ Can detect malware and other threats, even new ones, without them reaching your endpoint devices.
- ✓ Provides added security and improves productivity by controlled access through Web Content Control

INTERNET GATEKEEPER

FRONTLINE DEFENSE FOR YOUR BUSINESS - STOP MALWARE AT THE GATEWAY

Situated between the corporate network and the Internet, Internet Gatekeeper ensures that malware is not able to enter or leave the corporate network.

Internet Gatekeeper offers:

Virus protection for email, web traffic, and file transfers

Protects against virus and other malicious code hidden in email, web, and file transfer traffic.

Spam filtering

Avoid unwanted spam and phishing messages and filter them on the gateway level.

Web Content Control

Reduce productivity losses, bandwidth consumption and legal risk caused by unauthorized access to inappropriate or distracting web content.

Real-time protection

Provides security to the customer's network in real-time against new and upcoming malware.

All-inclusive compatibility

Provides interoperability with firewall and e-mail systems.

High performance and reliability

Making it a suitable solution for network security.

Detailed reporting via report logs

Enables administrators to track the product actions and take appropriate corrective steps.
