

F-SECURE RADAR

Vulnerability management is crucial in keeping your critical systems secure.

F-Secure Radar is a turnkey, enterprise-grade vulnerability scanning and management solution that gives you time to not only look for vulnerabilities, but also to start fixing them. F-Secure Radar is a recognized PCI ASV certified European solution, and adheres to risk and conduct compliance on current and future regulations (such as PCI_DSS and GDPR compliance).

Radar gives you visibility into shadow IT, map your full attack surface and respond to critical vulnerabilities associated with cyber threats. We also provide Radar as a managed service. Let the experts make sure you get the most out of your vulnerability scanning.

- ✓ **Comprehensive visibility**
Effective security mapping through precise discovery and mapping of all assets, systems, and applications on the network and beyond.
- ✓ **Streamlined productivity and security management**
Quickly address problems across multiple domains with an efficient service workflow, including vulnerability monitoring, automated scheduled scans, and ticketing for prioritized remediation and verification.
- ✓ **Reporting on risk**
Produce reports with credible information about your organization's security posture over time. Show and justify how IT security enables business continuity.
- ✓ **Reduced costs**
Vulnerability management can lower the cost of security significantly. It's less costly to deal with security before serious problems than during a crisis or incident recovery. Additionally, Radar's cloud resources allow organizations to lower their expenses.

Key points

- **Global internet and web discovery**
Discover your external global digital presence
- **Scan systems and applications**
Protect endpoints. Scan assets for vulnerabilities
- **Assess and verify**
Track all changes with PCI-compliant vulnerability scanning
- **Manage vulnerabilities**
Control central management with security alerting and forensics
- **Use the functionality of Radar with the API**
Integrate Radar with other application
- **Perform discover scans**
Map all assets on the application layer
- **Generate fully covering status reports**
Prepare standardized and custom reports on risk and compliance
- **Manage the tickets with ServiceNow**
Integrate to existing IT service management and ticketing system

Radar Value Elements

DISCOVERY SCANS	SYSTEM SCANS	WEB SCANS	WEB TOPOLOGY MAPPING
<ul style="list-style-type: none"> • A platform scanner - able to identify known vulnerabilities systems and software • Capable of scanning any network device that talks IP • Support authenticated scanning on Windows and Linux • Low number of false positive and false negative (high accuracy) • Constantly kept up-to-date based on Public vulnerability databases such as National Vulnerability Database and others • Vulnerabilities discovered by our security consultants • Certified as a PCI ASV scanning tool 	<ul style="list-style-type: none"> • A fast and reliable port scanner • Based on an asynchronous port scanning techniques • Fast host discovery mode (to be used on internal networks) • Supports service and operating system detection • Scan speed can be easily adjusted to suit your network capacity 	<ul style="list-style-type: none"> • A web application scanner - able to identify vulnerabilities in custom applications • Supports simple form-based authentication • Supports assisted crawling (aka. recordings) • Scalable to cover expanding needs • Certified PCI ASV scanning tool 	<ul style="list-style-type: none"> • Internet Treasures (Attack Surface Enumeration) • BGP (IP to AS) • Public sources (RIPE, Public BGP, CERNET) • IP & Service information • Port scans & banners • Domain names • Reverse DNS, zone transfer, brute force.. • Whois information • Linking together all of the above • Geolocation • Public/private databases

Supported Operating Systems

F-SECURE RADAR CLOUD

Run scans from the cloud as a true SaaS with scan nodes within the service

Supported browsers:

RADAR supports the latest versions of the following browsers:

- Microsoft Internet Explorer
- Microsoft Edge
- Mozilla Firefox
- Google Chrome
- Safari

F-SECURE RADAR PRIVATE

Run as an on-site solution where everything is behind your corporate firewall

Hardware:

Minimum 4 GB RAM (recommended: 8GB), min. 2 GHz CPU, min. 30 GB disk space

Operating system:

Windows Server 2008 R2 or newer

Local or Active Directory user with admin rights is required during installation

Network access to
